CS110 / WEEK 8

Utility Forge Route Receipt

Status	Route selected
Route	Operations Hub
Core functions	Add and remove list items; Start, pause and reset a timer; Export and reopen a text record
Team mode	No contracted Team Lead
Receipt ID	CS110-W8-OPERATIONS-B4F3338C
Selected at	2026-10-16T19:58:19.804Z
Pathway ID	operations
Requirements	2026-10-13.1

Requirements

R1 / 8A / Define the user and utility
Choose one route. Write the story or client brief, intended user, problem, useful result, limits, privacy boundary and assumptions.
Selected route: Operations Hub. Required core: Add and remove list items; Start, pause and reset a timer; Export and reopen a text record. Tutorial: https://courses.addp2p.com/courses/cs110/resources/week8/operations-quick-start.html.

R2 / 8A / Prototype and map the events
Create the interface prototype and whiteboard logic chart. Label input, event, method, data, output, failure and recovery. Complete one working event.
Selected route: Operations Hub. Required core: Add and remove list items; Start, pause and reset a timer; Export and reopen a text record. Tutorial: https://courses.addp2p.com/courses/cs110/resources/week8/operations-quick-start.html.

R3 * / 8B / Build the selected utility
Follow your selected route’s tutorial in the “Resources” section to build the base WPF app. Then adapt its labels and content for your named user or story. Complete its three core functions using named event handlers, focused methods, a list or collection, and visible status.
Selected route: Operations Hub. Required core: Add and remove list items; Start, pause and reset a timer; Export and reopen a text record. Tutorial: https://courses.addp2p.com/courses/cs110/resources/week8/operations-quick-start.html.

R4 * / 8B / Validate, recover and save text

Reject blank or unsafe input without crashing. Prove recovery, then export and reopen one plain-text record.

Selected route: Operations Hub. Required core: Add and remove list items; Start, pause and reset a timer; Export and reopen a text record. Tutorial: https://courses.addp2p.com/courses/cs110/resources/week8/operations-quick-start.html.

R5 / CLASS / Keep the two class records

Include 8A and 8B whiteboards, lecture notes, collaboration, concise Discord records, mandatory AI test, screenshots and accepted Git checkpoints. Reuse this evidence in the weekly repository.

Selected route: Operations Hub. Required core: Add and remove list items; Start, pause and reset a timer; Export and reopen a text record. Tutorial: https://courses.addp2p.com/courses/cs110/resources/week8/operations-quick-start.html.

R6 / WEEK / Document one reusable pattern

Finish README.md and PATTERN.md. Explain one event, method, validation, UI, timer, media, collection or file pattern that can be adapted later.

Selected route: Operations Hub. Required core: Add and remove list items; Start, pause and reset a timer; Export and reopen a text record. Tutorial: https://courses.addp2p.com/courses/cs110/resources/week8/operations-quick-start.html.

R7 * / WEEK / Submit the tested GitHub link

Add the Week 8 receipt, push the final source and evidence to GitHub, test instructor access, then submit the GitHub repository URL through Canvas before the next class.

Selected route: Operations Hub. Required core: Add and remove list items; Start, pause and reset a timer; Export and reopen a text record. Tutorial: https://courses.addp2p.com/courses/cs110/resources/week8/operations-quick-start.html.

This receipt records the selected route, team mode and current requirements. It does not establish completion, attendance, submission or a grade. Include it in the GitHub repository and submit the tested repository URL through Canvas.
